

*Interchim 75€ la boîte de 25. Mettre un sac initialement dans la bouteille "Waste" de déchet de liquide de gaine. Reprise une fois pleine, cette bouteille sera laissée une nuit sous agitation par barreau magnétique avec le sac toujours dedans. **Astuce pour gagner en efficacité** : agraffer sur un coin du sac une lamelle-tranche de bouchon en liège pour que le sac flotte verticalement pendant cette agitation. Le lendemain, vider le liquide dans l'évier et mettre le sac avec les déchets toxiques secs.* M. Bourge & S.C.Brown, Imagif, CNRS, Gif-sur-Yvette, France

PRODUCT INFORMATION

AMRESCO Destaining Bags (E732)

Remove Ethidium Bromide and other dyes from solutions safely, easily.

Ethidium Bromide is an extremely useful, easy-to-use dye for visualizing nucleic acids in solution and in agarose electrophoresis. Although the recent introduction of ethidium bromide solutions into the marketplace has eliminated many of the hazards of using the powdered dye for these applications, researchers are still faced with the difficult and unpleasant task of disposing of this toxic stain. The result is that many researchers neglect to remove ethidium bromide from their staining and electrophoresis buffers before disposing of them down the drain, which contaminates municipal waste-water with this toxic, mutagenic, carcinogenic substance.

AMRESCO now offers a way for you to remove Ethidium Bromide, Coomassie Blue, and other biological dyes and stains from solution for easy, safe disposal. AMRESCO Destaining Bags effectively extract milligram quantities* of ethidium bromide from solution without exposing research personnel to corrosive agents or contaminated substrates. The special adsorbent mixture retains dye molecules in a convenient bag for removal and incineration.

AMRESCO Destaining Bags are made with materials that can be safely disposed in incinerated trash.

- A 0.05 µg/ml solution of ethidium bromide has an A_{285} of approximately 0.01 at a 1X concentration.
- A 1 µg/ml solution of ethidium bromide has an A_{285} of approximately 0.1 at a 1X concentration.
- Changing bags during destaining will increase the rate of destaining and yield faster results.
- Destaining rates are independent of salt concentration.

* Each bag will extract up to 5 mg of ethidium bromide from solution during an overnight treatment.

ORDERING INFORMATION:

CODE	SIZE
E732	25 bags
